Trade & Agreement Section**
National Board of Revenue
Dhaka, Bangladesh

Preface

Trade with neighboring countries usually takes place through land customs stations. After the partition of undivided India, Bangladesh (the then East Pakistan) inherited some connecting points for passenger movement with India. Trade through those points was not pivotal at that time. After the independence of Bangladesh, many of those points became non-functional due to the lack of trade potentials and passenger movement facilities and over the years most of those points exist in paper only. Around 80s, some of those check points became the Land Customs Stations (LCSs) to trade with neighbors and trade gained pace through those check points over the years. After 90s, the policy of opening up the market accelerates the stride of increasing bilateral trade through those LCSs. The bilateral trade got momentum after 2000, as the industries, trade and businesses flourished in Bangladesh.

With the expansion of trade and volume of trading goods, it became necessary to operationalize more LCSs. Therefore, the National Board of Revenue took the initiatives to review the list of LCSs based on the trade potentials and strategic business interests of them. Hence, many non-functional and less-potential LCSs had been removed from the list and some new LCSs had also been declared based on the trade potentials.

According to the latest Statutory Regulatory Order (SRO) issued by the National Board of Revenue (SRO No-37-Act / 2022/53 /Customs, Date: February 16, 2022) the number of LCSs is 57 in Bangladesh.

The basic information of those LCSs is necessary for trade negotiation, policy decision, infrastructural need assessment, and so many points of views. It was very difficult to find all the basic information of those LCSs in a single cover of book. Therefore, the National Board of Revenue felt the necessity to consolidate basic information and publish it as a book.

This book furnished the basic information including geographical location, basic infrastructure, counterpart LCSs, distance, volume of trade and major trade items, passenger and vehicle number, staff strengths, etc. of those LCSs. Imports and exports are handled through these 57 LC stations.

We hope that this book will fulfil the need of basic information regarding the LCSs of Bangladesh for taking better policy decision regarding trade and infrastructure policies.
